Why Compost?

Food scraps get a new job!

Food scraps + leaves

Tiny helpers break them down

Compost helps soil!

With air, water, and time, tiny living things turn scraps into compost.

Help plants grow

Compost adds nutrients to soil.

Help soil hold water

Soil with compost can hold more water for plants.

Keep scraps out of landfills

Composting can reduce methane, a gas that warms our planet.

Tell a grown-up: How does compost help?

_____

Eat what you can. Compost the scraps!

Pick It Up Seattle

One person. One piece. One better place.
